Acknowledgments

The Washington State Department of Revenue hired the Center for Economic and Business Research (CEBR), which is an outreach center at Western Washington University located within the College of Business and Economics. In addition to publishing the Puget Sound Economic Forecaster, the Center connects the resources found throughout the University to assist for-profit, non-profit, government agencies, quasi-government entities, and tribal communities in gathering and analyzing useful data to respond to specific questions. They use a number of collaborative approaches to help inform clients, so they are better able to hold policy discussions and craft decisions.

The Center employs students, staff and faculty from across the University as well as outside resources to meet the individual needs of those they work with. Their work is based on academic approaches and rigor that not only provides a neutral analytical perspective but also provides applied learning opportunities.

The approaches utilized are insightful, useful, and are all a part of the debate surrounding the topics explored; however, none are absolutely fail-safe. Data, by nature, is challenged by how it is collected and how it is leveraged with other data sources. Following only one approach without deviation is ill-advised.

If you have a need for analysis work or comments on this report, you may contact the WWU Center for Economic and Business Research at 360-650-3909 or CEBR@WWU.edu.

The Center for Economic and Business Research is directed by Hart Hodges, Ph.D. and James McCafferty. This document was authored by McK Mollner, Margot Hutter, Anna Newberry, Dylan Braund.

Additional contributors to this report include the Washington State Department of Revenue, Washington State Office of Equity, and the Washington State Attorney General's Office.

Executive Summary

In 2024, the Legislature directed the Department of Revenue (DOR) to conduct a study regarding how to collect race and ethnicity information from organizations or entities that receive a tax preference(s). DOR contracted with Western Washington University's Center for Economic and Business Research to prepare this report. DOR provided a list of 786 tax preferences to the Center, which was used to search for materials related to the collection of race and ethnicity data. However, of 786 tax preferences, race or ethnicity data is generally not collected within their application materials.

As such, researchers identified several potential avenues to collect race and ethnicity data.¹ These avenues include a recommendation for an addendum to the Business License Application and an addendum to B&O tax filings. This addendum would come in the form of a survey to collect race and ethnicity data, guided by the existing standards set by OFM for data collection and reporting on race and ethnicity,² based upon 2024 revisions by the federal Office of Management and Budget (OMB) to *Statistical Policy Directive No. 15: Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity (SPD 15)*.³ In addition to the addendums to the Business License Application, DOR should offer the survey when taxpayers report a change in ownership, report tax preferences, or file tax returns. Many tax preferences are targeted towards businesses rather than individuals, which may require more information. Collecting race and ethnicity information from business owners alongside their business license application helps minimize the number of questions asked. The business license application already requires percentage owned for some business owners, a key piece of determining the demographics of a business. By offering a broad array of opportunities to complete the survey, taxpayers may be more likely to voluntarily self-report their race and ethnicity.

The collection of race and ethnicity data should be strictly voluntary, and sensitive to taxpayer concerns about data security or misuse. It is recommended that the Washington Legislature give DOR the authority to collect race and ethnicity data and designate data protection and uses, similar to Oregon Senate Bill 1 (2023)⁴. By designating clear access controls and data uses, taxpayers may be more likely to participate in voluntary reporting. Communications to taxpayers and tax preparers about what information is collected, how it is stored and used, and why it is being collected will be necessary to encourage participation. DOR estimates that the second year of implementing these recommendations will cost a total of \$664,900, followed by \$338,300 in the third year and 295,800 in ongoing costs each year thereafter.

¹ Race and ethnicity information cannot currently be collected as outlined in Substitute Senate Bill 5950, Chapter 376, Laws of 2024, Operating Budget 2023 2025 Supplemental, Section 139 (11), due to existing Washington law preventing such information sharing or disclosure. See RCW 43.17.425. Legislative authority would be necessary for implementation of these potential avenues.

Section 1: Introduction and Background

In accordance with Substitute Senate Bill 5950, Chapter 376, Laws of 2024, Operating Budget 2023 2025 Supplemental, Section 139 (11), the Department of Revenue (DOR) was directed to produce a report regarding its study on how to collect race and ethnicity information from organizations or entities that receive a tax Preference(s). Per [RCW 43.136.021](#), “tax preference” means an exemption, exclusion, or deduction from the base of a state tax; a credit against a state tax; a deferral of a state tax; or a preferential state tax rate. DOR collaborated with Western Washington University’s Center for Economic and Business Research (CEBR) to complete this report.

There are approximately 786 tax preferences currently active, per the [2024 Tax Exemption Study](#) completed by DOR’s Research and Fiscal Analysis Division. CEBR researchers used this list as a guide while searching for information about tax preference applications. Appendix A of this report includes a catalog of tax preferences. The catalog is composed of four tables, with tax preferences that require applications, certificates, or annual tax performance reports, and tax preferences with no documentation requirements contained in individual tables. There is some overlap between the first three tables, as some tax preferences may require both an application, a certificate, and an annual tax performance report. These preferences are then organized by type of preference for ease of reference. Please note that some tax preferences may appear in more than one table, as some preferences have shared requirements for an application, certificate, or annual tax performance report. Some preferences that require the filing of an Annual Tax Performance Report may also require additional forms, such as the Buyers Sales and Use Tax Preference Addendum. Few tax preferences require an application, certificate, or annual tax performance report. Race or ethnicity data is not generally part of their additional documentation. As a result, the research team identified several pathways that could be used to collect taxpayer race and ethnicity data.

Proviso (verbatim)

The text of the proviso states that the study must include:

- (b) ... The report must include cost and timeline estimates for collecting the race and ethnicity information. The department must consult with the office of equity to ensure that data collection is consistent with other efforts. The report must also include, but is not limited to, the following information:*
- (i) The cost and time required for the department to revise current reporting requirements to include race and ethnicity data;*
 - (ii) The cost and time required for the department to incorporate the collection of race and ethnicity data into future reporting;*
 - (iii) The cost and time required for the department to incorporate the collection of race and ethnicity data into its existing information technology systems;*
 - (iv) Recommendations on any exclusions from the requirement to report race and ethnicity data; and*
 - (v) Any statutory changes necessary to collect race and ethnicity data.*

Based on these guidelines, CEBR researchers conducted outreach with the DOR staff, Office of Minority and Women's Business Enterprises (OMWBE) staff, and the Attorney General's Office to understand existing systems and limitations on the collection of race and ethnicity data.

Literature Review

To better orient this study, a literature review of existing work on the collection of race and ethnicity from taxpayers was conducted. This included reviewing existing efforts to link taxpayer and demographic data, potential barriers, and how to determine demographics in relation to business ownership.

A key source was an Oregon DOR Legislative Report, titled *Implementation of Senate Bill 1*.⁵ This report details the implementation of a voluntary reporting system following the adoption of Senate Bill 1 in 2023⁶. Oregon is the first state to collect demographic data from taxpayers, and data collection began in January 2025. Taxpayers are given a one-page form while filing their personal income tax returns, upon which they can identify their race and ethnicity. This data, called Voluntary Self Identification (VSI) data, will likely not be mature enough for policy analysis for several years due to hesitancy among taxpayers in reporting. Over time, voluntary reporting rates may improve as trust is developed and more taxpayers learn of the program.

Oregon DOR included VSI information in quarterly tax professional liaison trainings, communicating the purpose of VSI and highlighting the confidentiality of the data. The VSI form is available electronically and as a paper form to make it accessible to taxpayers. The VSI data is stored securely and separately from tax data, but is indexed with a "doc key" so it can be attached to tax return data as necessary. All VSI data is hosted within TARDIS⁷, and only staff authorized by Research leadership have access as deemed necessary.

Staff from the Legislative Revenue Office (LRO) and Oregon Department of Administrative Services Office of Economic Analysis (OEA) may visit DOR to access the data. LRO and OEA staff must provide information about the data required, the purpose of examining VSI data, and who will access the data ahead of visiting DOR. DOR Research staff must be present while the data is accessed and review any created aggregate data to ensure no components of an individual's return can be identified. These restrictions are in place to protect the confidentiality of VSI data, which is prohibited from being used for audits or collections. DOR staff who perform those functions do not have access to VSI data.⁸ Additionally, the Internal Revenue Service (IRS) is prohibited from accessing this data.

These restrictions and limitations on data usage help prevent introduction of bias in auditing. A 2023 working paper by the Stanford Institute for Economic Policy Research (SIEPR)⁹ found that despite race-blind audit selection, Black taxpayers are audited at 2.9 to 4.7 times the rate of non-Black taxpayers. In a

⁷ TARDIS is an Oregon Department of Revenues internal department application, and hosts a secured database location accessible to research staff.

⁸ [Oregon Department of Revenue, *Voluntary Self-Identification of Race and Ethnicity : Individuals*, \(n.d.\).](#)- Under *How will the information be protected?* Tab.

⁹ [Working Paper, *Measuring and Mitigating Racial Disparities in Tax Audits*, Elzayn and Smith et al, 2023. Stanford institute for Economic Policy Research \(SIEPR\)](#)

2022 Government Accountability Office (GAO) report¹⁰, researchers discussed concerns from IRS officials that the collection of demographic information may create skepticism of the agency's ability to conduct unbiased audits. Taxpayers may be concerned that race and ethnicity data is available to auditors, which has prompted the strict access controls at Oregon's DOR discussed above. That same report indicates concern that collection of demographic data could significantly compromise voluntary compliance. Similar concerns drive the strict access controls and safeguarding of VSI data by the Oregon DOR. Trust in the IRS to fairly enforce tax laws as enacted by Congress declined between 2022 and 2024¹¹, which may also extend to state level tax agencies. This shift in trust among taxpayers may also hinder the collection of demographic information.

At the federal level, the GAO office has outlined four options for data collection and analysis for taxpayer demographic information.¹² These methods include the collection of data on tax forms, through surveying, interagency data matching, and imputation. The IRS does not require race or ethnicity to be included on the tax return, and as such, that information is not collected. Each of these methods would require additional resources for implementation and have their own benefits and limitations. Additionally, IRS and Treasury officials contacted for GAO's analysis expressed significant concern that collecting demographic data would hinder voluntary compliance. Current laws limit the ability for the Census Bureau and IRS to share data and any current projects involving data sharing require detailed reviews and significant resources.

Additionally, imputation does not directly link taxpayers to self-reported demographic information. Rather, it uses statistical methods to assign that information to taxpayers. While there are several methods to imputation, including the method referenced in Elzayn and Smith et al (2023), general limitations include the potential introduction of bias or error.

Previous research highlights a need for strong data security protections, segregation of responsibilities, and limited access to sensitive data. Under no circumstances should demographic data be accessed by individuals such as Washington State Department of Revenue auditors or collectors, wherein this information could unintentionally introduce bias. Some researchers argue that asking taxpayers to report race and ethnicity could introduce reluctance to file, as they may worry about data misuse.¹³

Section 2: Determining the demographics of businesses

While the demographics of individual taxpayers are relatively straightforward, the demographics of a business are less clear. The more complex ownership structures of businesses, excluding sole proprietorships, introduces several difficulties to identifying demographic information. However, there are some potential avenues to determine the demographics of a business, based on processes used by the Office of Minority & Women's Business Enterprise (OMWBE) and the U.S. Census Bureau's Annual Business Survey.

To be eligible for certification as a minority- or women-owned businesses, applicant businesses must meet a variety of criteria related to size, personal net worth, and ownership or control, among others. For the purposes of this report, we will focus on the ownership and control aspects of business ownership. By OMWBE's guidelines, to qualify for certification, the owners of the relevant demographic must own at least 51% of the business and show contribution of capital or expertise. These owners must also control the management and day-to-day operations of the business. Owners are required to show their contributions and prove they are proportional to the amount of the business owned, including capital contributions like money, equipment, or other items of value. Similarly, contributions of expertise are allowed in some circumstances if owners also made a capital contribution, such as expertise in a specialized field among other requirements.¹⁴

Per OMWBE guidelines, owners must show both managerial and operational control, including both high-level decision making and day-to-day operations of the company. These requirements shift depending on industry and number of involved parties, but entail the following requirements:

- The business is independent and does not overly rely on any other business to function.
- The owner is the highest officer of the company.
- The owner controls other company partners, members, or the board of directors.
- An overall understanding of the type of work the company performs, including managerial and technical competence and experience directly related to the company's work.
- The business has the necessary staff and equipment to perform its work.

These requirements make the demographic criteria utilized at OMWBE difficult to scale, as their primary audience is small businesses. When looking to apply a similar criterion to a larger management structure, this may quickly become unwieldy. Under OMWBE's criteria¹⁵, there are three types of people who can be considered to have ownership interest and are reported to determine a business's demographic information.

1. Any person who receives, or has the right to receive, more than ten percent of either the gross or the net sales from the business during any year.
2. Owners' spouse or domestic partner, if:

¹⁴ These requirements can be found within this page, under *Contributions of Expertise*. "[Certification Eligibility](#)". [Washington State Office of Minority and Women's Business Enterprises, \(2024\)](#). They are also found under current rules, [Office of Minority and Women's Business Enterprises, Permanent Rules: WSR 25-01-023, \(2024\)](#), relevant to WAC 326-20-048.

¹⁵ [Washington State Office of Minority and Women's Business Enterprises, "Ownership Interest Fact Sheet", \(2024\)](#).¹⁵

- a. The owner used assets to acquire the business that were held jointly or as community property by a spouse or domestic partner, and
 - b. The spouse or domestic partner participates in the management of the business.
3. Any of the following persons, whether or not they are actively involved in the business:

Type of Ownership	Persons
Sole proprietorship	Sole proprietor
General partnership	All partners
Limited partnership, limited liability partnership, or limited liability limited partnership	1. All general partners 2. All limited partners
Limited liability company	1. All LLC members 2. All managers
Privately held corporation	1. All stockholders
Publicly held corporation	1. All stockholders
Multi-level ownership structures	OMWBE will review each entity to determine which individuals must qualify for certification.

To determine the demographics of business owners, each relevant owner then submits relevant documentation. Among this documentation is the Owner's Affidavit¹⁶, wherein owners report their status as a minority-owned, woman-owned, or socially and economically disadvantaged business enterprise. Through this, they certify that they are a member of a relevant group before submission.¹⁷ One of these forms must be completed for all relevant owners, which may be a prohibitive time cost for reporting for businesses with multiple levels of ownership or a large number of stakeholders. The OMWBE process is designed with small businesses in mind, and as such is not necessarily scalable for large businesses and corporations.

The Annual Business Survey (ABS), conducted by the United States Census Bureau, provides information on selected economic and demographic characteristics for businesses and business owners. This includes sex, ethnicity, race, and veteran status. ABS data is sourced from responses to the survey, data from the Economic Census, and administrative records data. This data is collected on a company or firm basis, rather than an establishment basis. Selected firms were asked to report the percentage of ownership and demographic information for up to four persons owning the largest percentages in the business.¹⁸ ABS uses a similar 51% ownership metric¹⁹ to determine majority ownership, which is then used to tabulate firms by classifiable statuses. This collected survey data, with a limitation of up to four business owners, may be more attainable due to the relatively quick nature of self-reporting in a survey rather than through multiple separate documents. However, this may naturally exclude some businesses with larger ownership structures.

¹⁶ [Washington State Office of Minority & Women's Business Enterprises, Owner's Affidavit: State Certification Application, \(2018\).](#)

¹⁷ Notarized copies of this document are relevant only for federal certifications, whereas state certifications only require owner signature.

¹⁸ ["Annual Business Survey Methodology", United States Census Bureau, \(2023\).](#) under Sampling

¹⁹ "Business ownership is defined as having 51 percent or more of the stock or equity in the business..." per methodology linked in Footnote 11.

For corporations or other multi-level ownership structures, individuals like members of the board of directors and the executive team may be an appropriate avenue for collecting demographic information. This would then allow for a smaller number of individuals to report information, potentially encouraging participation. Under a process such as the one outlined under OMWBE, reporting may become an extensive process and barrier for participation.

Section 3: Possible avenues of collection in Washington

In [RCW 43.17.425](#), DOR must limit information collected to the minimum necessary (a) to comply with state or federal law requirements, (b) in response to a lawfully issued court order, (c) to perform agency duties, functions, or other business, as permitted by statute or rule, (d) to comply with policies, grants, waivers, or maintaining other funding requirements, or (e) in the form of deidentified or aggregated data.. Absent adoption of statute or rule permitting DOR to collect race or ethnicity information, this limitation would prevent DOR from initiating new data collection practices.

Currently, a limited number of tax preferences require an application. Of the 786 tax preferences active in Washington, less than 30 require an application. These applications could be amended to include demographic information questions. An additional 23 preferences require that a business holds a certificate to be eligible for the preference. These records are kept by appropriate vendors, businesses, and local authorities, and are not inherently held by DOR. These certificates allow for business transactions to forgo appropriate taxes as outlined by individual certificates. These tax preference applications, whether filed through MyDOR or on paper, could potentially collect demographic information relevant to business owners. Additionally, when businesses file taxes each year, a voluntary reporting system, similar to Oregon, could be enacted. This system, in the form of a survey, can also be widely available for individual taxpayers utilizing preferences through tax return filing. An additional 33 tax preferences require the filing of an *Annual Tax Performance Report*. On a preference-by-preference basis, an additional question collecting business owners' race and ethnicity could be included on this form.

However, because most tax preferences do not require additional forms, an addendum to the *Business License Application* may be ideal. By collecting this information through the business licensing process, hesitancy among taxpayers about reporting may be avoided. It is important to note that collection of race and ethnicity data should be strictly voluntary. Additionally, by hosting the questions as a separate survey, it can be offered to taxpayers through a variety of avenues. An addendum can also be completed by existing licensed businesses that are required to renew their business license to maintain state or city endorsements. Other existing businesses without this renewal requirement could supply the information on a supplemental basis when filing their firm's Business & Occupation (B&O) tax filing. Collecting race and ethnicity information from individual taxpayers would be relatively straightforward comparatively. By offering the survey when taxpayers file their tax returns, the survey has a better chance of capturing a wide range of taxpayers both as individual and as businesses.

Some preferences may be utilized largely by corporations or businesses with organizational structures that complicate demographic reporting. Particularly for tax preferences related to industries such as aerospace, biofuels, or manufacturing, smaller business structures may be a minority, inhibiting data collection on race and ethnicity.

The addendum to the business license application should follow typical demographics reporting categories in alignment with the federal Office of Management and Budget and Washington's Office of Financial Management.²⁰ Business owners are already expected to report percentage owned as part of the business licensing process, limiting the additional questions asked of business owners. Additionally, the addendum could be set on the number of owners who report demographic information. This could align with ABS maximum of four owners or expand to a greater number²¹ to help capture larger ownership structures. Alternatively, the demographic information for a corporation's board of directors and executive leadership may serve as an appropriate proxy without creating a significant process for businesses that hinders reporting.

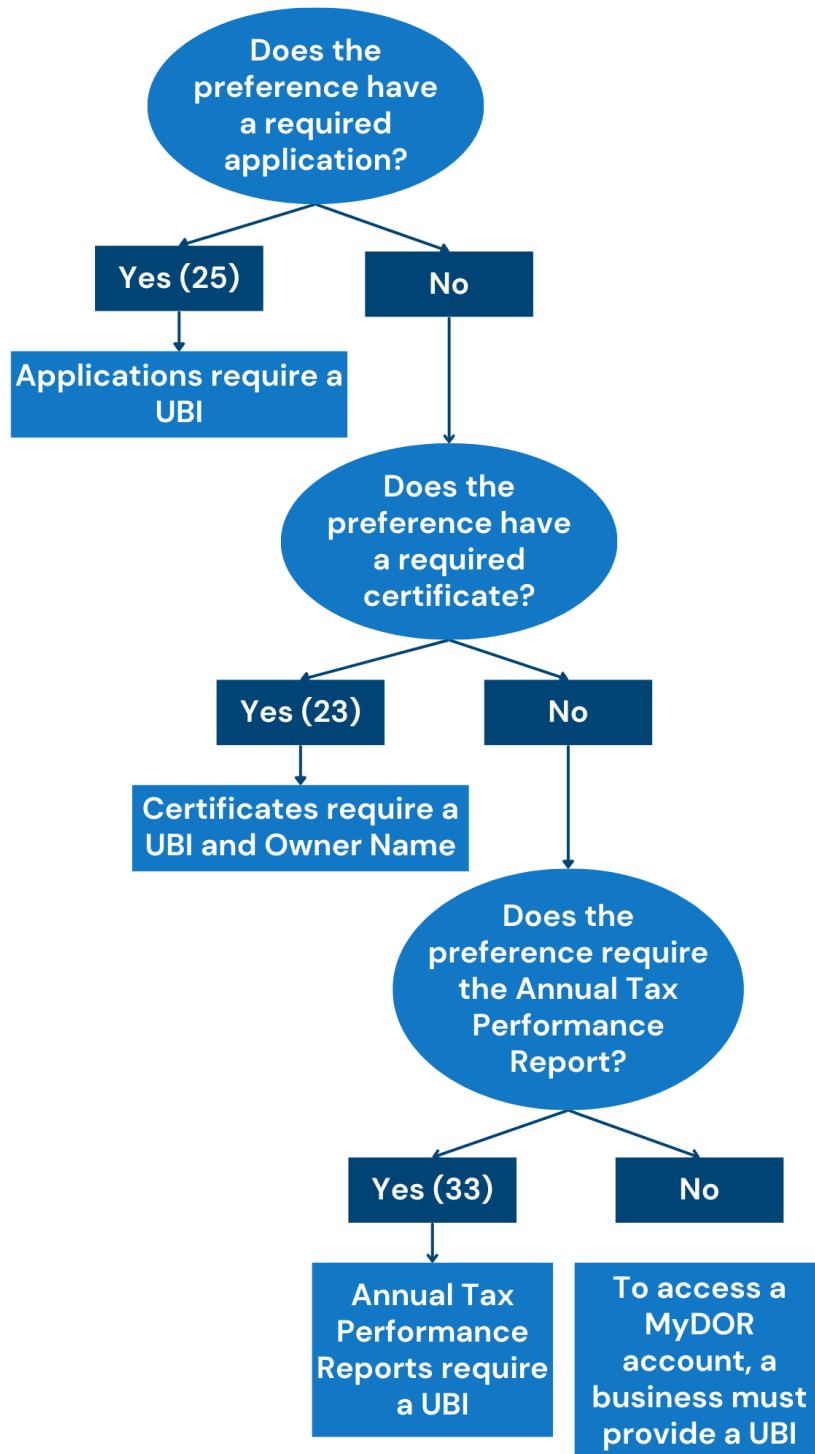

While not all tax preferences require an application, all businesses have a Washington State Unified Business Identifier (UBI)²² number which is reported when firms file taxes. Rather than implementing applications for all tax preferences, UBI numbers offer an existing avenue to examine tax preference usage. When assessing the usage of a tax preference, theoretically connecting the demographic information attached to UBIs with the utilization of preferences may offer insight into usage. However, it will take several years for any implemented data collection to be robust enough for analysis.

²⁰ [State of Washington Office of Financial Management, *Standards for Data Collection and Reporting on Race/Ethnicity*, \(2002\).](#)

²¹ CEBR researchers recommend that the number of maximum owners within this form be between 10 and 20, to help set reasonable reporting limits and not cause undue burden on business owners.

²² A UBI number may also be called a tax registration number, a business registration number, or a business license number.

WA Tax Preferences Flowchart

Relevant Statutory Requirements and Changes

Through [Chapter 19.02.030 RCW](#), the DOR is given general authority to administer the business license application. Although this authority includes collecting information necessary to issue business licenses, neither [Chapter 19.02 RCW](#) nor DOR's rules under [WAC 458-02](#) specify the collection of demographic information for business licensure. Under [RCW 43.17.425](#), DOR is therefore prohibited from collecting this information. If the Legislature gives the Department the express authority to collect demographic data as part of the business license application, it should be on a voluntary basis.

Under [RCW 19.02.115](#), licensing information is generally considered confidential and privileged. If demographic information were collected during the business licensure application, this information would arguably be protected under the existing statute as confidential licensing information. RCW 19.02.115(3)(d) specifically permits the disclosure of confidential licensing information "for official purposes only, to the governor or attorney general, or to any state agency, or to any committee or subcommittee of the legislature dealing with matters of taxation, revenue, trade, commerce, the control of industry or the professions, or licensing," and would arguably allow for data sharing with other government entities for official purposes such as studying tax policy so long as such data sharing is done in compliance with RCW 43.17.425. This data would be subject to RCW 39.34.240(1), as confidential information under RCW 19.02.115 is considered at least category 3 data.²³ As such, WaTech's data sharing policy²⁴ would apply and require a data sharing agreement before DOR could share the demographic data outside of the agency.

RCW 19.02.115(3) includes other exceptions to the general prohibition against disclosing licensing information. Furthermore, the state's Public Records Act requires that any exemptions from the disclosure of public records be interpreted narrowly.

In order for DOR to collect demographic data in the manner contemplated, new legislation would be needed to allow it. It is strongly recommended that new legislation authorizing collection include strong protections against disclosure of demographic data before collection begins. Washington must be vigilant and forward-thinking in developing and implementing strong data governance policies.

Recent changes in long-standing federal policy related to the sharing of confidential tax information may also discourage voluntary reporting.²⁵ The IRS publicly disclosed a deal with the Department of Homeland Security's (DHS) Immigration and Customs Enforcement (ICE) on April 7th, 2025.²⁶ This deal will allow information sharing between the IRS to disclose the tax information of immigrants under criminal investigation to ICE. This agreement has raised significant concerns for undocumented taxpayers, who can file tax returns through an Individual Taxpayer Identification Number. The fear caused by this policy may decrease participation.

In light of the change in policy by the IRS, strong local and state level data protections are necessary to help safeguard against unauthorized access and misuse of sensitive data collected as part of the

²³ Category 3 information, per the [Washington Data Classification Standard](#) is "information that is specifically protected from either release or disclosure by law" (2023)

²⁴ [Washington Technology Solutions, Data Sharing Policy, \(2023\).](#)

²⁵ [Rose, Joel, "The IRS finalizes a deal to share tax information with immigration authorities", \(April 8, 2025\).](#)

²⁶ [Duehren, Andrew, "Top IRS Officials Said to Resign After Deal to Give ICE Migrants' Data", *Seattle Times*, \(April 8, 2025\).](#)

business license application process. The *Keep Washington Working Act* ([Laws of 2019 ch. 440, E2SB 5497](#))²⁷ already requires state agencies (including DOR) to collect the minimal amount of personal information from people in Washington. This information collected cannot be shared with immigration agencies unless required by law according to RCW 43.17.425(2)(b). These protections can be further built upon. For example, [Oregon Senate Bill 1](#), Section 4b, specifies that collected race and ethnicity data is not accessible to the IRS. The Legislature may wish to create legislation confirming the protection of separated demographic data and designate appropriate access controls, similar to the structure implemented through [Oregon Senate Bill 1](#), Section 4. Similar legislation in Washington would help ensure that demographic data in DOR's possession is protected from disclosure or misuse.

Finally, the collection of demographic data should be guided by existing standards set by OFM for data collection and reporting on race and ethnicity,²⁸ based upon 2024 revisions by the federal Office of Management and Budget (OMB) to *Statistical Policy Directive No. 15: Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity (SPD 15)*.²⁹ Additionally, the Washington State Office of Equity also recommends, at minimum, that the demographic data categories for race and ethnicity be aligned with the U.S. Office of Management and Budget's Statistical Policy Directive No. 15 (OMB SPD 15). This standard requires the use of one combined question for race and ethnicity and encourages respondents to select as many options as apply to how they identify.

The Washington State Office of Equity also recommends that the Department of Revenue plan to incorporate subdomains to collect disaggregated demographic data that align with the forthcoming standards. The specific race and ethnicity fields that would be collected by the Department of Revenue should align with these standards and allow for future modifications.

Cost of Collection and Hosting Demographic Data

DOR provided a fiscal estimate of the cost to implement the recommendations included in this report regarding demographic data collections. This estimate is inclusive of collecting data from all taxpayers, not just those utilizing tax preferences. A survey to collect race and ethnicity data would be available when taxpayers file a Business License Application, renew their license, report a change in ownership, report tax preferences, and file tax returns.

Race and ethnicity information is sensitive data and must be secured. Only limited staff should have access to the information. The Department may enter into data sharing agreements with other agencies that request the data, with protections in place to prevent sharing the data with third parties. While it is unknown when implementation would begin, the below expenditures assume implementation would begin July 1, 2026, with the survey available to taxpayers January 1, 2027.

²⁷ [Washington Congress, Certification of Enrollment: Engrossed Second Substitute Senate Bill 5497, Chapter 440, Laws of 2019, 66th Legislature, 2019 Regular Session.](#)

²⁸ [State of Washington Office of Financial Management, Standards for Data Collection and Reporting on Race/Ethnicity, \(2002\).](#)

²⁹ [Federal Register, Revisions to OMB's Statistical Policy Directive No. 15: Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity, \(March 29, 2024\).](#)

With these assumptions, DOR incurs no costs in the first year, fiscal year (FY) 2026. In the second year, FY2027, the department would incur total costs of \$664,900, including time and effort equal to 4.89 FTEs and \$84,700 in object costs, such as computer system changes. Activities under labor costs include:

- Set up, program, and test computer system changes.
- Gather requirements, attend implementation meetings, and document system changes.
- Design and create survey form.
- Develop and maintain survey questions.
- Manage data sharing agreements.
- Provide expertise on privacy considerations.
- Create a special notice and update relevant information on the department's website.
- Answer additional phone calls and counter inquiries from businesses, individuals, and accountants regarding demographic survey.
- Receive mail and paper correspondence, key in survey information, process paper documents for scanning and verify imaging, index data items.
- Review survey submissions to verify data quality.
- Respond to data requests and questions, compile statistics, and manage data.

For the third year, or FY2028, total costs amount to \$338,300. This includes 2.9 FTEs. This includes the following activities:

- Continued computer system testing, monitoring, and maintenance.
- Maintain survey questions.
- Receive mail and paper correspondence, key in survey information, process paper documents for scanning and verify imaging, index data items.
- Review survey submissions to verify data quality.
- Respond to data requests and questions, compile statistics, and manage data.

Ongoing costs for FY2029 and beyond total \$295,800 per year and include similar activities described in the third year, with time and effort equal to 2.6 FTEs each year. These estimates assume that this data will be held segmented for privacy and security, as outlined in previous sections.

Barriers to Voluntary Reporting

Some barriers to the collection of demographic data include distrust of governmental institutions and potential misuse of data. In 2024, the IRS Comprehensive Taxpayer Attitude Survey (CTAS)³⁰ found declining trust in the IRS to fairly enforce tax laws as enacted by Congress. Trust in the IRS has been linked with increased tax compliance. While these findings are specific to the IRS, similar circumstances may affect state level entities like the DOR.

Similarly, ethnic communities may have additional concerns about potential misuse or abuse of demographic data. Some research has shown that historically, the IRS has audited Black taxpayers at 2.9

³⁰ [IRS Executive Report, Comprehensive Taxpayer Attitude Survey, \(December 2024\).](#)

to 4.7 times the rate of non-Black taxpayers, despite race-blind audit selection.³¹ The historical misuse of demographic data collected by government entities like the Census Bureau³² may further contribute to mistrust of collection efforts target towards race and ethnicity data. Taxpayer concerns about data misuse, security, and confidentiality should be addressed through strict protections of collected data.

Additionally, taxpayers may be unwilling to spend the time to report voluntary race and ethnicity data. As such, efforts should be made to minimize the difficulty of voluntary reporting forms. Resources to support taxpayers and readily answer questions, such as Frequently Asked Questions (FAQ) outreach that reiterates data protections and conveys the benefits of reporting such information are essential. Similarly, including information about any collection efforts among DOR's events and workshops may help disseminate information. Clear communication and programmatic safeguards that auditors and other similar staff at DOR would have no access to race or ethnicity data may help alleviate concerns among taxpayers about potential bias.

As noted above, the memorandum of understanding³³ between the IRS and ICE, signed April 7th, 2025, allows for the sharing of previously internal-only tax information for immigrants under criminal investigation. Undocumented taxpayers could previously report income using a Taxpayer Identification Number without fear of that information being shared with immigration authorities. This change in IRS's long-standing policy—abandoning confidentiality protections for undocumented taxpayers—may reduce the willingness of others to provide demographic information with confidence.³⁴ As previously discussed, the Treasury Department and IRS have stringent access controls on taxpayer information to maintain confidentiality, but the law provides an exception in that confidentiality for criminal investigations, which is foundational for the agreement between the IRS and ICE. The recent actions by the IRS to share tax information with ICE raises serious concerns about data privacy and the potential misuse of sensitive personal information and confidential tax information —especially as it pertains to vulnerable communities. This development highlights the recommendation that the Legislature pass stronger data protection laws before DOR begins collecting demographic data from taxpayers.

Proactive steps to protect race and ethnicity data at the state level are necessary to safeguard against unauthorized access and misuse. This protection is especially important to protect against entities that may use such data for purposes that conflict with our values around equity, inclusion, and civil rights. It is critical that a robust framework is built at the state level, even as federal agencies make decisions that could undermine public trust. This issue is an urgent reminder of why local and state protections are not just necessary, but essential. This recent development with the IRS-ICE data sharing is a clear example of the need to be vigilant and forward-thinking in Washington's data governance policies.

Conclusion and Recommendations

As the systems currently stand, DOR would need to create additional reporting avenues to collect race and ethnicity information from business owners and individual taxpayers, which it cannot do under current legal restrictions. Legislation that gives DOR the authority to collect demographic information, with clear protections and access controls, is an essential step to collection. Oregon Senate Bill 1 (2023) provides an example of enshrined protections and access controls for collected race and ethnicity data. Once legislation authorizes DOR to collect race and ethnicity data, collection should be done through a survey accessible to taxpayers as an addendum to the Business License Application, as well as when renewing their license, reporting a change in ownership, reporting tax preferences, and filing tax returns.

The voluntary survey should be available to all taxpayers, not just those who utilize tax preferences. Businesses should be able to report multiple potential owners, based upon a standard set by the DOR. Some businesses, such as corporations, may be unable to report race and ethnicity data in a meaningful way. To help encourage participation, the survey should also be as minimal as possible. This data would need to be held securely, and with limited access to prevent misuse. Establishing protections that the information is not disclosable or accessible to Washington state DOR auditors or collectors and is maintained only in aggregate will be essential to establish and communicate with taxpayers. It may take time for voluntary reporting to reach a level that promotes data reliability and usefulness in analysis.

Furthermore, the recent change in IRS policy to share tax information with ICE raises serious concerns about data privacy and the potential misuse of sensitive personal information and confidential tax information. This development further emphasizes why adopting data protections and defining DOR's authority to collect this information are necessary steps before DOR begins collection of this data. This is critical to prevent misuse by entities that may use such data for purposes that conflict with Washington's values around equity, inclusion, and civil rights. As federal agencies make decisions that could undermine public trust, it is essential that Washington build robust frameworks for data protection at the state level.

The proviso included the following requirements, addressed briefly below:

(i) The cost and time required for the department to revise current reporting requirements to include race and ethnicity data;

To revise the existing requirements, DOR estimates total costs of \$664,900 in the second year. This is inclusive of 4.89 Full Time Equivalent (FTE) employees and \$84,700 in object costs.

(ii) The cost and time required for the department to incorporate the collection of race and ethnicity data into future reporting;

In the third year, DOR estimates total costs of \$338,300, including 2.9 FTEs. Ongoing costs for the fourth year and beyond equal \$295,800, including 2.6 FTEs.

(iii) The cost and time required for the department to incorporate the collection of race and ethnicity data into its existing information technology systems;

These costs are included in the second-year cost estimates, as discussed in Section 3 and Appendix A. Object costs total \$74,700 in the second year, inclusive of computer system changes and contract programming.

(iv) Recommendations on any exclusions from the requirement to report race and ethnicity data; and it is recommended that any reporting is strictly voluntary, with stringent data protections and access controls. Taxpayers may be hesitant to provide race and ethnicity data due to concerns about misuse and introductions of bias. Creating a requirement to submit race and ethnicity information may serve as a deterrent to filing tax documents, and reduce compliance among taxpayers. Recent agreements between the IRS and ICE may discourage compliance among vulnerable taxpayers, such as undocumented immigrants who file taxes through Individual Taxpayer Identification Numbers.

(v) Any statutory changes necessary to collect race and ethnicity data.

The Washington Legislature would need to authorize DOR to collect this information. In so doing, the statute should consider similar requirements to Oregon Senate Bill 1 (2023), which gives the Oregon Department of Revenue the authority to collect self-reported race and ethnicity data on a voluntary basis. The bill also outlines the purposes for which data may be accessed, by whom, and for what purpose.
